

An algorithm becomes a function when used in an application.

A process that creates necessity may drive invention.

It may be good to know the area of my limits and freedom

Reason for writing another version of a program can be for the beauty of detailing

Doing manual things in software may help in getting idea to automate it

You should put one single imperfection in every thing you like to perfect

For a typical good thing "How" it is being done is more important than "what" is being done

How means ==> how much love

how much sincerity

how much effort
